Discover AI (TAMU)

Project Proposal

David Cornejo & Ian Wang

Our team had brainstormed these following topics; AI in Social Media, Online Shopping, and Self Driving cars. We had brainstormed these to be included into our project, as they all have a simple pros and cons list for each.

- For Social Media, it can show the user what they would like to see based on past interactions but it can keep the user very hooked to its service.
- For Online Shopping, the user can also see what they like based on past interactions, but can be a huge cause of impulsive buying due to its accurate product suggestions.
- For Self Driving cars, it can prevent any future car accidents and no more traffic as all cars can avoid each other on the road, but we must hand our lives in the safety of the AI; The Life of a Pedestrian or Driver.

Next, our team brainstorms on using the Interactive Video, Screen Recording, Code a Game, Create a Meme, Design a short comic, or even build a Virtual Tour. As well as, having the ability to use multiple of these at once for our final presentation. After a quick conversation, our team agreed upon the idea of using the Virtual Tour Creator, and using multiple presentation applications within the Virtual Tour Creator.

The audience will be presented with a Virtual Tour that almost immerses themselves into our areas of interests for this project. They will hopefully from our presentation learn new things as well as being able to relate to our thoughts in regards to applications of machine learning.
